Ammyy Admin is a free remote access software for Windows with two main features. The first is to remotely control another computer for tasks such as support, administration, office configuration or even educational purposes. The second is remote desktop sharing and, with its File Manager function, you can transfer up to 140TB of data. Released in 2011, Ammyy Admin has rolled many of the best features of remote access software in a single program. Ammyy Admin is an excellent all-round software for Windows. Ammyy Admin users is fast and easy to use. It connects remote computers in seconds without any installation or configuration. Sharing your office with a friend or colleague can be done in a few simple steps. You can even connect to computers with no one at the other end. The interface is also very intuitive so you won't be mucking around with a manual trying to work everything out. Some remote access software can start to complicate the look, while having fairly basic features. Ammyy Admin is the opposite of that. What are the main features of Ammyy Admin? The first feature you will encounter when downloading this is that it is free. Who doesn't like freeware? A second feature that you will realize as soon as your download is complete is that Ammyy Admin does not require installation. You just need to open .exe file and you're ready to go! I can assure you that this does not come as the standard on all remote access software. One of the main concerns you may have when using this type of software is security. Fortunately, Ammyy Admin uses an advanced hybrid encryption algorithm (AES and RSA) that provides a highly secure connection. Because it offers such a high level of security, it appeals to businesses, but it is important for personal connections as well. Another reason why companies may be tempted to use Ammyy Admin (but again, it is not negative for personal use) is the function of voice chats. This can be used for anything from lectures to courses. Aside from Ammyy Admin's ability to take the remote control from another computer, his ability to exchange files is a huge asset to the software. It allows you to copy files between local and remote computers with one up to 140TB. It's a huge amount of space and much more than you're ever likely to need. You can even stop and start downloads without any loss of information. You can create files, move, rename, delete and more. There is no need to worry about the firewall, NAT or port. Your firewall or VPN won't require adjustments because Ammyy Admin is transparent, protecting local PCs and remote computer networks. You also don't need someone to look after the remote office you're accessing. Ammyy Admin lets you take full control: changing the user, connecting, disconnecting, restarting the computer, etc. Are there better alternatives to Ammyy Admin? The number of remote access software on the market is enormous. Different blogs have quite different top ten and it's just to compare the free options. Once upon a time this software was mainly associated with anti-virus companies and hackers, but it is now fully integrated with the commercial market. Ammyy Admin really has great global characteristics, compared to its competitors. The biggest bump on the road you might encounter is if you don't have a Windows computer (it's only compatible with Windows). Microsoft Remote Desktop is a big competitor on Windows users, but without file transfer. Ammyy Admin is a better option. Similarly, Chrome Remote Desktop works with Windows, Mac and Linux, but it doesn't have a chat like you do with Ammyy Admin. For businesses, TeamViewer is arguably a better option mainly because it can integrate with a lot of popular business software, including SalesForce, Zendesk and Amazon Workspaces. AnyDesk is also a more preferable remote access software for many remote utilities and allows you to connect up to 10 computers, but there is not much in it. Ammyy Admin should be on your shortlist. Ammyy Admin is an excellent remote desktop access software. While there is no clear reason to classify it as the best, there is also no reason to choose another software on this point. It is really a matter of personal preference. Some may need software that can connect to multiple computers at the same time, and companies may want something that can fit in with other programs they use.
